Universal problem: HCP's are struggling to treat IDA because patients can't tolerate the GI side effects of oral iron salts

Oral ferrous salts dissociate in the stomach. Unabsorbed iron (Fe+) generates reactive oxidative species (**ROS**), causing irritation and damage to the intestinal lining **and gastrointestinal (GI) side effects**

Up to 70% of patients can experience GI related side effects[1,2] including bloating, dark stool, nausea distention
Patients comment: "Side effects of oral iron worse than the symptoms of IDA"

Up to 60% of patients will discontinue treatment with ferrous (iron) salts primarily due to GI adverse events and lack of effectiveness[3]
